

HARVEST INDUSTRIAL PARK

Property Highlights

- · Concrete building with yard
- 11,040 Sq. Ft. Office/Warehouse
- Fenced and graveled
- Crane ready 10 Ton
- Open Office with laminate floors
- Bonus storage mezzanine
- Available immediately

HARVEST INDUSTRIAL PARK

Property Information

Municipal Address: 101, 3496 63 Avenue, Leduc, AB

Legal Description: Plan 1520109, Block 5, Lot 2

Site Size: 1.07 Acres (+/-)

Building Size: 11,040 Sq. Ft (+/-) per bay

Office 1,020 Sq. Ft. (+/-) Warehouse 10,015 Sq. Ft. (+/-) Mezzanine 1,020 Sq. Ft. (+/-)

Loading: (2) 14' x 16' grade loading doors per bay

Zoning: IL (Light Industrial)

Crane: 10 ton crane ready

Ceiling Height: 24'

Power 400 AMP, 600 Volt

Sumps: Yes (In each bay)

Possession: Immediate

Other High-efficiency building

Turn-key, insulated concrete tilt-up **Highlights**

Compacted yard

\$\$\$

Lease Term: 5 Years Lease Rate: \$15.00/Sq. Ft

Operating Costs: \$3.97/Sq. Ft.

HARVEST INDUSTRIAL PARK

Location Highlights

- Prominent service industry for Fort McMurray
- Located 34 kms from Edmonton
- **Minutes from Edmonton International Airport**
- High exposure to 65 Avenue/New **Industrial Park**
- · Quick access to multiple major transportation routes including **QEII** 623, Anthony Henday Ring Road

HARVEST INDUSTRIAL PARK

Energy Efficiency

Concrete has excellent thermal properties and, when combined with "Sandwich Panel" tilt-up construction, can offer solutions to cold climate construction. "Sandwich Panel" has advantages when developing buildings requiring environmental control (such as cold storage amenities or high technology facilities).

Tilt-up is a much tighter building system than traditional methods; an R16 Tilt-Up

panel system will perform as well as or better than an R32 low mass construction system. The contributing factors are non-conductive thermal bridging, 3" thick insulation and the thermal mass of the concrete. Tilt-Up concrete buildings offer an overall energy and life cycle performance that is typically 20% to 60% more efficient than non-tilt-up buildings.

Thermal Efficiency Comparison

The illustration below shows a winter heat loss comparison between the existing building and recent tilt-up addition. Red and yellow indicate heat loss and air movement.

Existing Steel Construction Concrete Addition -10° C -30° C

Industrial

In an industrial building, tenants really appreciate the column-free perimeter of a load bearing tilt-up structure. They can layout their racking without interruption around the perimeter of the structure as there is no loss or impedance caused by traditional structural column framing.

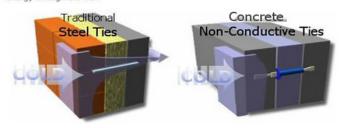

Tenants also appreciate the added security and durability of a reinforced concrete panel. After all, a concrete panel is much more difficult to cut open than a traditional metal skin or EIFFS-cladded façade. Not only are the contents protected, but the owner protects his investment in the structure itself and realizes insurance benefits too. When we add an insulation core to the reinforced panels, the thermal storage capacity of the walls will assist in maintaining the interior temperature should there be a power failure. This added benefit provides the lowest operating costs among all wall assemblies

Energy efficiency - The natural heat sink properties of concrete reduce energy costs. Tilt-up buildings offer an overall energy and life cycle performance that is typically 20-60 percent more efficient.

Safety, security and durability - Vandalism and maintenance are minimized while security is increased.

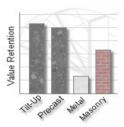

Non-Conductive Thermal Ties

Traditional steel ties allow heat to be transmitted through the wall, and result in elevated energy costs. Concrete non-conductive thermal ties do not transmit this

Long-Term Value

Concrete is a long-lasting construction material. which avoids maintenance problems typically associated with traditional construction systems. This means that concrete tilt-up buildings retain more value compared to other construction technologies.
